Components

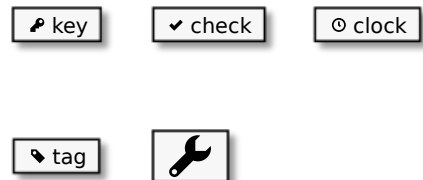

A list of plantUML components and their names, most can be used in any diagrams. The *sequence* diagram only supports a subset.

Icons

PlantUML supports [Open Iconic](#) iconset out of the box. Any icon can be rendered when embedding it in `<&..>`

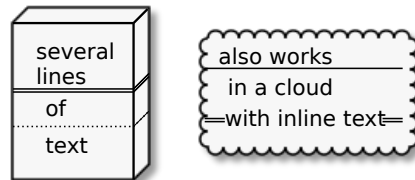

```
card "<&key> key"  
card "<size:42><&wrench></size>"
```

Multiline components

Text can be spread across multiple lines in components by declaring the text in `[]`

```
node mynode [  
  several  
  lines  
  ====  
  of  
  ...  
  text  
]
```
